**EJERCICIO DE INTERCOMPARACIÓN
“ESTUDIO DE POLIMORFISMOS DE ADN EN MANCHAS DE SANGRE Y OTRAS
MUESTRAS BIOLÓGICAS”**

EXERCISE EIADN NR 31 (2023)

DEADLINE: 15/05/2023

Submitted items

2023/Forensic Module
M9: forensic unknown non human item

Seal Number

Approach:

Practical Forensic study

2023/Non human item

- **M9:** forensic unknown non human item for species identification.
- ◆ Identify the species in item M9.

Methodology to be used

The analyses will be performed by using the markers and methods of routine use or under implementation at each laboratory. The items must be processed as real casework and, if possible, as blind samples.

INDEX

	Pág.
1. Methodology	
1.1. DNA extraction, purification/concentration and quantitation	3
1.2. Methodology used for species identification in item M9	3
1.3. Other considerations regarding meth different to reported in the preceding tables	3
2. Practical studies results	
2.1. Could you identify the species of the non human contributor/s in item M9?	3
2.2. Conclusions and remarks about ítem M9	4
3. Compromises to be met by the participant	4
Date and signature of the person in charge	4
Request for certification	4

1. Methodology *Read carefully the instructions provided before filling in this section***1.1 DNA Extraction, purification/concentration and quantitation**

TABLE 1

Item	Extraction Purification/ Concentration (Code)	EPO0 (Specify)	Quantitation (Code)	C00 (Specify)
M9				

See Appendix 2023 for codes

1.2 Methodology used for species identification in item M9

Make a cross in the method used and specify in the adjacent box the methodology applied (primers, kits, techniques used, etc.)

Methodology applied

Cytochrome b sequencing	<input type="checkbox"/>	<input type="text"/>
SPInDEL	<input type="checkbox"/>	<input type="text"/>
STR	<input type="checkbox"/>	<input type="text"/>
Others	<input type="checkbox"/>	<input type="text"/>

1.3 Other considerations regarding methodology different to reported in the preceding tables

--

2. Practical studies results:

The report of the theft of a very valuable pure pedigree pet is received. The neighbour of the person who reported the case is suspected. The police search the defendant's house and collect several samples, including a stained mop. A piece of the stained mop is sent for analysis to determine whether the stain is of human or animal origin, and if it is the case for genetic identification.

2.1 After performing DNA extraction from the mop and using any method for species identification. Could you identify the **species** of the non human contributor/s in item M9?

YES	<i>Genus species</i>
M9	

NO
M9

2.2 Conclusions and remarks about item M9

--

3. Compromises to be met by the participant

The analyses have been performed in the facilities of the participating laboratory and by its own staff, following working protocols used in routine casework together with safety precautions. **The laboratory commits to analyze this item for the Intercomparison Exercise INTCFM/GHEP-ISFG. Additionally it could be used as a reference material and/or quality control for the laboratory either using the techniques required in the Exercise or other forensic techniques.**
