PROFICIENCY TEST
"ANALYSIS OF DNA POLYMORPHISMS IN BLOODSTAINS AND OTHER BIOLOGICAL SAMPLES"

BASIC LEVEL   EXERCISE EIADN -34 (2026)   DEADLINE: 15/05/2026

Items sent

 2026/Kinship Module
  M1 to M3: reference items
 2026/Forensic module
  M4: forensic unknown item
  M5: hair sample

Seal number

Approach:

2026/Kinship Module – Basic level

Practical Kinship study
- **M1, M2, M3:** reference items for genetic profiling.

Theoretical Kinship study
   Participants are asked to solve the proposed theoretical study.

2026/Forensic Module – Basic level

Practical Forensic study
- **M4:** forensic item for genetic profiling.
- **M5:** hair for mitochondrial DNA analysis.

♦ Determine the body fluid component or possible components of the item M4.
♦ Could any of the donors from the reference items M1, M2, M3 have contributed to the item M4?
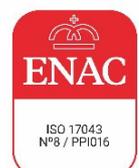

Theoretical Forensic study
   Participants are asked to solve the proposed theoretical study.

Methodology to be used

The analyses will be performed by using the markers and methods chosen by the laboratory or those use of routine or that are being under implementation. The items must be processed as real casework and, if possible, as blind samples.

The National Institute of Toxicology and Forensic sciences is the accreditation holder
Activities marked are not bound to ENAC accreditation

3.Practical Studies Conclusions

3.1 Kinship Module

3.1.1 *Remarks about items M1, M2 and M3

Indicate any comments or remarks, you consider, about the analyzed items. Please, remember that only the genetic profiling of the reference items M1 to M3 is required; it is not necessary to investigate a genetic relationship among them.

3.2 Forensic Module

3.2.1 Determine the body fluid component or possible components of the item M4.
   Components (mark with an X the component/s detected)

	Blood	Semen	Saliva
M4			

3.2.2 Indicate the minimum number of contributors detected in the item M4.

	1	2	3
M4			

3.2.3 Could any of the donors from the reference items M1, M2, M3 have contributed to the item M4?

	M1	M2	M3
M4			

3.2.4 *Remarks about items M4 and M5.

25/02/2026

4. Theoretical studies

Read carefully the instructions provided in order to fill in the results tables and the rules of participation in order to know the establishment of assigned values and the evaluation of results
https://ghep-isfg.org/en/proficiency/participation/

In order to solve the theoretical studies (kinship and forensic) it is assumed that:

- the population is in Hardy-Weinberg equilibrium and that no correction is made due to population substructure (theta=0).
- silent alleles rate and mutation rate are 0.
-drop in, drop out correction=0

Calculations have to be made by using the "2026 Alleles Frequencies" table provided.

4.1 Kinship theoretical study
4.1.1 Approach

Albert Jr. claims to be the son of a well-known businessman, Mr. Albert, who has passed away. His mother, Ms. Pilar, worked for many years as the Company's secretary, and she was dismissed when she became pregnant by the businessman. Nevertheless, the businessman continued to pay child support until Alberto Jr. reached the legal age.

The judge finds enough evidences to accept the paternity suit and orders a DNA test. The alleged father's body was cremated, but a Formaline-Fixed Paraffin-Embedded (FFPE) tissue of a coronary artery biopsy, performed at the hospital before his death, is available. A genetic profile is obtained from the FFPE tissue.

- The genetic profile of Ms Pilar (Albert Jr´s mother) s is available. There is no doubt that Ms Pilar is Albert Jr's biological ´mother.
- The genetic profile of Albert Jr is available
- A partial genetic profile obtained from the FFPE tissue is available (Mr Albert, alleged father)

Markers	Ms. Pilar	Albert Jr.	Alleged father (FFPE)

4.1.2. **Paternity index**

Calculate the paternity index taking into account the following hypotheses:

H0	Mr. Alberto is the father of Alberto Jr., considering that Mrs. Pilar is the biological mother.
H1	Another man randomly selected from the population and not genetically related to Mr. Alberto is the biological father of Alberto Jr., considering that Mrs. Pilar is his biological mother.

Report the partial paternity indexes and the total PI in **Table 8**.
Use scientific notation (Excel format) and rounding off to 4 decimals places Ex. 1,2346E-01

4.1.5 *Conclusions and remarks about the kinship theoretical study.

4.2 Forensic theoretical study
4.2.1 Approach

A young woman with disabilities reported a sexual assault perpetrated by several individuals. he states that her boyfriend (with whom she had never had sexual relations), his brother and a cousin of both of them participated in the assault.

Following an examination at the hospital, a vaginal wash is performed, after analizing a mixed DNA profile is obtained.

The boyfriend (N), the boyfriend´s brother (H), and their cousin (P) are arrested. Reference DNA samples are taken.**The reference profile of the victim is available.** The corresponding genetic profiles are obtained from the reference samples.
Determine if any of the three males are compatible with the mixture and, based on that, calculate the LR.

25/02/2026

4.2.2. LR value

Report the partial Likelihood Ratio (LR) values, as well as the total LR in **Table 10**, according to the following hypothesis:

H0	The victim and the person involved (N, H or P) have contributed to the mixed genetic profile obtained in the vaginal wash.
H1	The victim and an unknown person taken at random from the population and not genetically related to the previous ones have contributed to the mixed genetic profile.

Indicate if one of these males is present in the mixed genetic profile*

Boyfriend (N)		Boyfriend´s brother (H)		Their cousin (P)

6. Suggestions for subsequent exercises

[ ]

7.Compromises to be met by the participant

The analyses, both, the generated results and their statistical evaluation have been performed in the facilities of the participating laboratory and by its own staff, following working protocols used in routine casework together with safety precautions. **In accordance with the donors' consent, these items will be processed anonymously for the Intercomparison Exercise INTCFM/GHEP-ISFG. Additionally they could be used as a reference material and/or quality control for the laboratory either using the techniques required in the Exercise or other forensic techniques but always for the purpose of human identification, analyzing non coding regions or regions that would not provided sensitive information about the donor: illnesses, pathologies or other genetic information which could infringe his/her privacy.**
